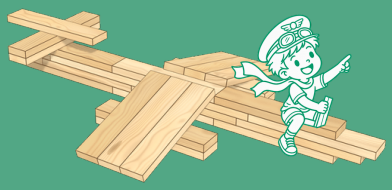
Simple plane

Difficulty :

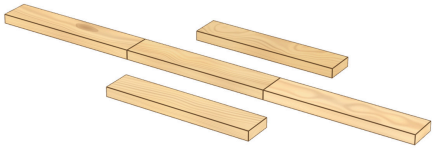
Pieces : ~25

Age : +4

Duration : ~10 min

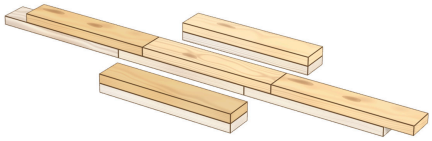


1



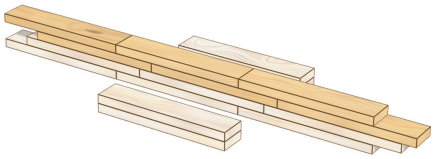
Lay 3 planks flat, end to end: that's the fuselage, the body of the plane. Then add one plank on each side, well clear of it: those are the engines, and the wings will lean on them later.

2



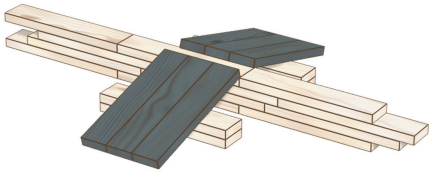
Lay another course of 3 planks on top of the first, but shift it slightly forward (this shift is what gives the plane its nose). Also stack a second plank on each engine, with no shift this time.

3



Build 2 more layers, still 3 planks each: the 3rd moves forward again by a tiny bit, and the last one comes back just above the first. The nose (the front of the plane) takes shape as a staircase.

4



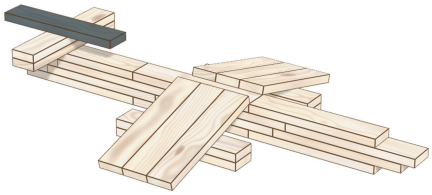
Lay 3 planks on each side, on a slope: the top rests on the back of the fuselage, and the bottom runs down to the table, passing over its engine.

5

At the back, lay one plank across the fuselage, then a second on top of the first: that's the tailplane, the part that helps the plane fly straight.

6

BRAVO !



To finish, lay one last plank along the axis of the plane, on top of the tailplane: that's the fin, the part that stops it from turning on its own. Your plane is ready for take-off!
